## Electric Eel Mfg. Celebrates 50th ARA Rental Show

Electric Eel Mfg. first exhibited at the ARA Show back in 1958 and marks their 50th anniversary at the 2009 Rental Show in Atlanta, Georgia.

Based in Springfield, Ohio, Electric Eel produces a full range of drain and sewer cleaning machines along with high pressure water jetters and pipeline inspection cameras designed specifically for the rental market.

Electric Eel's product line has grown dramatically over the years, from the original dual cable Model C Sectional Machine which was displayed at their first show, to the newly introduced Model CT auto feed unit.

While Electric Eel's product range has changed dramatically over the years, the focus on providing superior quality along with a high level of service and support has not. Electric Eel is committed to supporting its rental customers with fast shipping of machines and parts, providing a variety of training and instructional materials, on-site training by a nationwide network of sales reps, and by expert advice and support direct from the factory.
